EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorizations for this examiner's amendment was given in a telephone interview with Christopher J. Lutz to amend claim 26, and introduce the phrase stored on a computer readable medium.

Claim 26 has been amended to:

(Amendment) claim 26. (Currently Amended) An encoded set of processor based instructions including program code **stored on a computer readable medium** embodying program logic for directing a processor responsive to the instructions to perform steps for allocating and reallocating management responsibility of manageable entities to agents in a managed information network comprising: program code for detecting a manageable entity requiring assignment of an agent for management responsibility of the manageable entity; program code for identifying a manageable entity type of the manageable entity requiring reassignment of management responsibility; program code for identifying a set of deployed agents in the managed information network, each of the agents having an agent type and operable to manage at least one manageable entity of a particular manageable entity type; program code for applying failover rules using the identified type of the manageable entity, the agent type of the managing agent and the compatibility

associations to determine a primary agent from among the identified set of deployed agents for managing the manageable entity, further including applying the rules according to a precedence order defined by the priority comprising: 1) failover chain, 2) highest agent version, 3) best logical distance to manageable object, and 4) lowest management load, wherein if applying a rule results in multiple compatible agents operable to manage the manageable entities, applying the next rule in the priority; and program code for sending a message to the determined primary agent to inform the determined primary agent of the responsibility for managing the manageable entity, the program code for identifying a manageable entity type further operable to: identify each agent type for which a failover is operable; and for each identified agent type, process an ordered failover chain of agent types compatible to manage the manageable entities corresponding to the identified agent type, the ordered failover indicative of a priority of agent types, and compatibility determined by the compatibility associations.
